

**DYNAMIC CONVEYOR  
CORPORATION**

## Box Filling Conveyor Systems

In-Line and Side-by-Side Box Filling Systems by Dynamic Conveyor are designed to meet your box filling needs. Systems are designed for un-attended box filling of parts by weight and/or count. Systems are available in three sizes to accommodate boxes from 6" to 27".

# We build conveyors. You reconfigure.

Systems allow for user defined fill rates to insure accuracy up to 0.3 ounces, providing hours of unattended precise box or container filling.

The Box Filling Systems offer simple control set-up, quick disconnects between conveyors, and an easy to read visual indicator on a large graphical LED display.

In-Line Box Filling by count are the most economical type of systems.

Cycle count systems are cost effective and easy to implement.

Side-by-Side Box Filling systems are used when there are space constraints.

### Benefits:

- User defined fill rates insure accuracy
- Smooth transfer of boxes from 0 – 200 pounds

- Allows for unattended operation of filling boxes by count and/or weight
- Simple control set-up and quick disconnects between conveyors
- Database allows for storage of multiple jobs
- Easy to read visual indicator on a large graphical LED display
- High quality Mettler Toledo Scale
- Visual and audible alarms
- Energy efficient by operating with 110V and using no compressed air
